

Security Dashboard Console

Industrial network security management software designed for OT networks

Feature and Benefits

- Central management and monitoring of all your IEC-G102-BP Series and IEF-G9010 Series devices
- Full visibility on the real-time status of your network security and OT systems
- Bulk configuration to reduce deployment time and maintenance costs

Introduction

The Security Dashboard Console (SDC) software is a centralized security platform that allows you to manage IEC-G102-BP Series industrial next-generation IPS and IEF-G9010 industrial next-generation firewall devices on the network and monitor OT cyberthreats to ensure uninterrupted production line operation. SDC offers an additional layer of network protection by providing centralized critical asset visibility, network analysis, and auto pattern updating.

Centrally Manage Network Security

Security Dashboard Console helps administrators and operators centrally manage and monitor all IEC-G102-BP Series and IEF-G9010 Series devices more effectively from a single platform. This offers administrators a way to easily execute policy, firmware, and pattern updates to groups of devices and ensure the network is always backed by the latest security updates.

Enhance OT Networks Visibility

The intuitive dashboard offers data visualization in the form of interactive widgets that can be customized to provide you with the information you need. Having full at-a-glance visibility on network activity and the status of OT systems lets administrators monitor the security network in real-time.

Increase Convenience and Interconnectivity

Reduce your maintenance costs by troubleshooting your security network remotely across different facilities through a single central management platform. SDC monitors and logs activity at the device level for events such as cybersecurity, policy enforcement, protocol filtering, system logs, audits, and asset detection.

Specifications

Hardware Requirements

vCore	4 vCores for up to 100 managed nodes 8 vCores for up to 200 managed nodes 12 vCores for up to 300 managed nodes 16 vCores for up to 500 managed nodes
RAM	8 GB for up to 50 managed nodes 16 GB for up to 200 managed nodes 32 GB for up to 500 managed nodes
Hardware Disk Space	50 GB free disk space minimum, 300 GB recommended
Supported Hypervisors	VMWare ESXi 6.x or above / VM Workstation 14 or above / KVM 2.x or above

Ordering Information

Model Name	License Type	No. of Nodes	License Term
SDC-New-1Y	SDC license	1 node	1 year
SDC-New-3Y	SDC license	1 node	3 years
SDC-New-5Y	SDC license	1 node	5 years
SDC-Add-1Q	SDC add-on license	1 node	3 months
SDC-Add-2Q	SDC add-on license	1 node	6 months
SDC-Add-3Q	SDC add-on license	1 node	9 months
SDC-Add-4Q	SDC add-on license	1 node	1 year
SDC-Renew-1Y	SDC renewal license	1 node	1 year
