## INTRODUCTION

Antaira Technologies' **UTS-USBC-RJ45-A** is a USB-C to RJ45 Console Cable that connects from a computer USB port to the RJ45 console port of a networking switch. This rollover cable connects a computer with Windows or macOS to an Antaira serial console port for configuration and management. The integrated Future Technology Devices International (FTDI) chipset handles the USB signaling and protocol functions including an RS-232 level shifter. FTDI drivers are available for download on Antaira website under the product page.
